

# Our Schools Our World

*laying the foundations for a brighter and safer future*

Our Schools,  
Our World

in partnership with  
**NET ZERO**  
2030

develop an integrated environmental education curriculum gradually and systematically 'greening' the curriculum and supporting the development of green skills

enable children and young people to develop a close connection with nature to support health & wellbeing and develop pro-sustainability behaviours

develop school organisational systems and practices which support sustainability and local Net Zero targets

empower children and their families to become changemakers both personally and collectively and develop climate leadership skills in young people

## Curriculum structure

The curriculum is covered through six key overarching sustainability, climate change and environmental education themes.

### **Biodiversity, Energy, Food, Consumption and Waste, Transport, Water**

Within these themes pupils are taught sequentially the key knowledge and skills against the following domains:

1. Scientific background – systems thinking
2. Impact on environment and climate change
3. Present response/climate action
4. Climate justice/equity
5. Possible futures
6. Intersectionality/viewpoints
7. Personal response/Community response

Throughout all this work, we systematically plan greater connection with nature
